NUMBER SIX

Nutritional Evaluation of a Selected Military Population . . . . . 577

C. FRANK CONSOLAZIO, RALPH SHAPIRO, GERHARD J. ISAAC AND  
LAURENCE HURSH, WITH THE TECHNICAL ASSISTANCE OF  
VERNON R. BIRCHLER AND GILBERT R. COMAN

In this regional study, the nutritional status of military personnel stationed in Colorado was evaluated by anthropometric and biochemical measurements. The findings are of interest and indicate the value of such measurements in determining the nutritional status of military populations.

Effect of Low Nutrient Intake During Pregnancy on Obstetrical Performance and Offspring . . . . . 586

KALYAN BAGCHI AND AMIYA K. BOSE

These authors have made an effort to determine the nutritional status, the obstetrical performance and the health of the offspring in two groups of pregnant women—150 women in the low socioeconomic strata and fifty women in the high socioeconomic strata. They discuss the implications of their findings and suggest the possibility of a reorientation in the approach to nutritional requirements in pregnancy.

*Subject Index* . . . . . 616

### ERRATUM

Since there are some errors in the article entitled "Calcium Balance and Calcium Requirement in Spinal Osteoporosis" by B. E. C. Nordin, M.D. (*Am. J. Clin. Nutrition*, 10: 384, 1962), Dr. Nordin will supply anyone interested with a corrected reprint.
